DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1-9, the prior art alone or in combination does not teach the limitation of a method for detecting an accumulation of an electrostatic charge on an object with an electric charge detector comprising a capacitor, the method comprising the steps of: causing a periodic variation of capacitance in a capacitor's electrode, determining a phase of said periodic signal with respect to a phase of the periodic variation of capacitance, and detecting the polarity of the electrostatic charge based on the phase of the periodic signal with respect to the phase of the periodic variation of capacitance.

With respect to claims 10-20, the prior art alone or in combination does not teach the limitation of an apparatus for detecting an accumulation of an electrostatic charge comprising: an electrode in which a capacitance being varied periodically, mean for determining a phase of said periodic signal with respect to a phase of the periodic variation of capacitance, and mean for detecting the polarity of the electrostatic charge based on the phase of the periodic signal with respect to the phase of the periodic variation of capacitance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation Relevant of Prior Art

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Tamai et al. disclose current detector using magnetic electric conversion element and electric connection box using the same.

b. Marko et al. disclose method and apparatus for detection signal processing.

c. Maass et al. disclose opto-electronic tachometer and position detector of an electric motor.

d. Campbell et al. disclose electrostatic discharge detector and display.

e. Young et al. disclose electric field detector.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nguyen T Ha whose telephone number is 571-272-1974. The examiner can normally be reached on Monday-Friday from 8:30AM to 6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on 571-272-2800 ext. 31. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
